

# One security pane of glass for your business.

Bring cameras, alarms and access control together across every site. Find the footage you need, respond faster and stay on top of faults - all from one app, using compatible equipment you already own.

**LIVE VIEW, EVERYWHERE YOU NEED IT**

## The control room, in a browser tab and in your pocket.

The live view that used to mean a wall of monitors in a back office now opens on any manager's laptop. No VPN, no IT ticket, no trip to the recorder.

### Every manager sees only their sites

Sort the estate by region, store or manager. Role-based scope means head office sees everything and a store manager sees only what is theirs.

### AI that knows a cat from an intruder

On-device AI tells people, vehicles and animals apart - so wind in a tree no longer wakes you at 2am, but someone on the back drive does.

### Cloud backup you never think about

The recorder can be stolen, burnt or unplugged. The footage that matters is also held off-site, in the regions you choose, indexed and ready to share.

### One live wall, any cameras you choose

Drag the cameras your team watches into a saved layout: one site, one region or the whole estate. Whoever needs that wall opens it from their own browser.

### Find evidence 90% faster

One timeline ties CCTV, alarms, access and ANPR together. Jump to the moment, share by signed link.

### Compliance built in

A minute-by-minute audit log that satisfies GDPR and the rules of evidence, written automatically.

### Insurance-ready by default

Named-user logs, per-camera retention and video-verified alarms - what underwriters ask for at renewal.

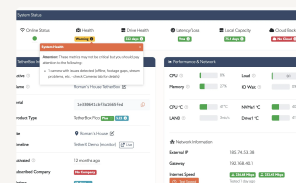

### Same login on the laptop, tablet and phone.

Browser on the laptop, native iOS and Android app on the phone - same login, same sites, same live feeds. No VPN and no port forwarding to see your own cameras from a hotel room.

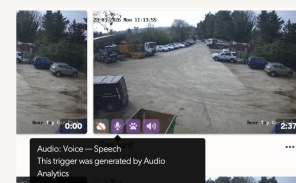

### Health monitoring finds problems first

Cameras fail, disks fill, links flap. TetherX tells you the same hour it happens - not the day you need the footage - with plain-English fixes like "add a UPS, this site has had three power cuts this month".

### Intervene live, or let a monitoring centre take it

Issue a live audio challenge through a camera speaker ("you are being recorded, please leave the site") to end most after-hours incidents. For monitored sites, verified events route straight to your Alarm Receiving Centre.

#### WHY BUSINESSES CHOOSE TETHERX

Video, access and alerts on one platform - across one site or a hundred.

#### One platform, one bill

Video, access control and intruder alerts on one dashboard - not three systems from three vendors.

#### Records through internet outages

The TetherBox records on site at full rate through an internet outage, and uploads once the line is back.

#### Your retention, full 4K

Set retention per camera at full 4K - long where it matters, short elsewhere.

#### Keep your own ARC

Connect your existing monitoring station - Immix, Sentinel, CONXTD, Bold and others. No forced control-room switch.

#### Built in the UK and Australia

Engineered in-house, supported locally. Your data stays in your region, wherever your sites are.

#### Ringfence legacy cameras

Existing cameras stay reachable behind the TetherBox, off the public Internet - phase any replacement on your own budget cycle.

#### SECURITY & COMPLIANCE

#### Enterprise-grade by default

Bank-level AES-256 encryption, TLS 1.2+, ISO 27001 and SOC 2 certified data centres, GDPR-ready, with pick-your-region storage for data sovereignty.

WORKS WITH THE CAMERAS YOU ALREADY OWN

1,000+ integrations, plus any ONVIF device - no rip-and-replace
