

CORPORATE OFFICES • HQ • REGIONAL • GLOBAL SOC

Every office, every country, on one login.

TetherX puts every office on one platform, with each country's footage in its own region. Your SOC opens all of them from one login, wherever the offices are.

The out-of-hours alert in another timezone arrives with verified context, and the door event and the camera that saw it share one timeline.

THE GLOBAL ESTATE PROBLEM

Nobody can see all four offices at once.

One login replaces four apps and four VPNs, on the recorders already fitted in every office.

One global login • one audit log

FOLLOW-THE-SUN SOC

London

UK-hosted

Footage stays in the UK and never leaves it. Out of hours here, the global SOC still has the live picture.

Frankfurt

EU-hosted

GDPR-resident in the EU, scoped to the regional FM. Tonight's alert is raised here, on the local clock.

New York

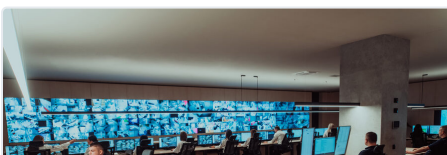

US-hosted

US data stays US-side, on the same dashboard as every office. Evening shift here, watching live.

Sydney

AU-hosted

Footage stays in Australia. The desk on shift here picks up that alert next, full context already attached.

Follow-the-sun handover

The next desk on shift picks up the alert with the verified clip and the badge event attached.

Tailgating caught at the turnstile

COMING SOON

Two people through on one badge raises an alert, and you open the clip beside the swipe.

Investigations across borders

You search four countries at once and get back one list of clips.

1,000+

integrations, plus access and visitor on one timeline

No

inbound ports - each TetherBox connects out, nothing connects in

15 min

to bridge a building - one office at a time

RECEPTION, TURNSTILES, DESKS

The badge swipe and the camera that saw it, on one timeline.

The day-to-day risk in an office is rarely a break-in. It is a tailgater behind a badged employee, a laptop off an empty desk, a contractor who is not who the visitor log says.

-  Tailgating alerts at reception and turnstiles, tied to the badge.
-  Visitor and contractor sign-in logged against the camera.
-  Desk and IT-equipment theft investigated from one timeline.

FOLLOW-THE-SUN · FRANKFURT TURNSTILE

Sydney desk

Tailgate flagged - Frankfurt 02:14

SOC opens - clip + badge event 02:15

Local FM - Frankfurt scope only 02:16

EU footage - stays EU-hosted **GDPR**

One shift hands to the next, and we log every view against a name in every country.

WHAT GLOBAL SECURITY AND IT ASK FOR

The questions after the control-room tour.

Search the whole estate

Filter every office and country by object, colour, zone and time, from one search box.

No per-office patch windows

We push features and patches from the cloud to every TetherBox, so nobody books a firmware night per country.

Storage region per office

Each building's footage stays in its own region. AES-256 at rest, ISO 27001 / SOC 2 infra.

No inbound ports

Outbound-only VPN per TetherBox - no camera on the open Internet, no inbound port for regional IT to open.

BUILT FOR ENTERPRISE OFFICE ESTATES

One HQ to a multi-country portfolio.

Per-region scope

Global SOC sees the estate; a regional FM sees their country; a local lead sees their building. One dashboard.

Investigations HR can stand behind

One named-user audit log across borders. Signed, time-bounded evidence links replace the USB stick.

Keep each office's kit

1,000+ integrations and any ONVIF device - bridge each building, one office at a time, no estate-wide shutdown.

Records through internet outages

The TetherBox records on site at full rate through an internet outage, then uploads what it holds when the line is back.

WORKS WITH THE CAMERAS AND ACCESS KIT IN EVERY OFFICE

1,000+ integrations, plus access control and visitor management on one timeline - any ONVIF camera, no rip-and-replace

SCOPE YOUR OFFICE ESTATE

Plan your next **site with us.**
