

PRIMARY • SECONDARY • MAT • FE • HIGHER ED

From the school gate to the **safeguarding file** - in one platform.

A safeguarding lead needs a clip before the parent meeting at four. A group head needs estate-wide oversight without driving to every campus. The site manager just wants the gate camera online.

TetherX gives every role the view they need, scoped to their school, on one login.

-  Vape, congestion and tamper sensors reach the places a camera can't go.
-  Operator talk-down clears after-hours trespass - no 6am call to the head.

A TERM-TIME DAY ON TETHERX

From the gate to the safeguarding file, in one day.

The same login serves the front office, the pastoral team and the safeguarding lead - each scoped to what they are named on, every action on the record.

- 08:25**  **Gate ANPR flags a non-pickup vehicle**
The plate is not on the pickup whitelist. The front office checks the drive camera before the bell.
- 11:12**  **Vape sensor pings the Year 10 toilet block**
No camera in the washroom - the sensor signals, and the corridor camera timestamp shows who walked in.
- 13:45**  **Congestion alert at the canteen corridor**
Lesson change turns a corridor into a crush; pastoral gets the alert and steps in before it does.
- 15:50**  **Safeguarding lead pulls a signed clip for a child-protection referral**
A time-bounded link the officer opens, and we log every view against a name.
- 21:00**  **After-hours motion on the science block**
Operator talk-down clears the trespassers; the keyholder is not woken, the head has no 6am call.

 **Evidence out in minutes**
Pull the window, set an expiry, share to the police or local authority - and every view stays on the record.

 **Access requests answered in days**
Every view and share already logged for your privacy team. Optional clip redaction for third-party faces.

 **One platform per group**
Every campus on one dashboard, scoped per role - not a recorder login per site.

SENSORS & AI - WHERE A CAMERA CAN'T LOOK

Cameras can't see in the toilets. Sensors can.

The hardest places to safeguard are the ones a camera should never be in. Discreet sensors give the signal; the corridor camera that *did* see who went in gives the timestamp.

-  No audio, no image - a signal a camera could never give, in a place it should never be.
-  The corridor camera timestamp shows who walked in just before.
-  The pastoral lead gets a named notification on the phone they already carry.

EVIDENCE AUDIT • CAM-12 CORRIDOR

named user

View - clip 15:47-15:49 15:50

Bookmark - flagged for safeguarding lead 15:51

Share - child-protection officer **SIGNED • 7d**

Audit entry - written automatically 15:52

Every action against a named user. The record inspectors and the board expect.

THE AI AND SENSOR SUITE

Sensors and AI for the places that matter most.

**Vape & smoke sensors**

Aerosol, THC and noise sensors in toilets and changing rooms - flag vaping and bullying where a camera can never go.

**Hallway congestion**

AI flags abnormal crowding at lesson change - canteen queues, stairwell pinch-points, blocked exits.

**Lockdown audio**

Trigger a live or recorded announcement across one site or the whole group - one button, named user logged.

**Propped-door & tamper**

Fire doors held open, cameras covered or moved - all surface as named events on the same timeline.

WHAT A GROUP IT LEAD ACTUALLY ASKS

The questions after the safeguarding tour.

**Search a term in seconds**

Filter every camera and campus by object, colour, zone and time - not four recorders searched by hand.

**No patch windows**

Updates and security patches roll from the cloud - no firmware night in half-term, no version spreadsheet.

**Cloud, on-prem or hybrid**

Record on the TetherBox, the cloud, or both - a school-network outage never stops recording. AES-256, ISO 27001 / SOC 2 infra.

**Change retention by policy**

A new DPA review or insurer ask - update retention, resolution and analytics per camera from the dashboard.

WORKS WITH THE CAMERAS ALREADY IN THE BUILDINGS

1,000+ integrations, plus vape sensors, ANPR and access - and any ONVIF camera, no rip-and-replace
