

HOTELS & HOSPITALITY · LOBBY TO LOADING BAY, GROUP TO GM

Your brand reputation lives in the back corridor as much as the **lobby**.

Cloud CCTV, access control and alarms across every property - tuned for the three people who run hospitality.

Group HQ sees the brand-reputation picture. The GM sees the property. The on-duty manager sees the lobby and the back corridor on a phone, with live audio to talk a situation down.

THREE AUDIENCES, ONE PLATFORM

Group HQ, GM and on-duty manager - each see only what they need.

One platform, three views. Configured once at onboarding; nobody sees a camera they are not scoped for.

GROUP HEAD OFFICE The estate	GM & PROPERTY OPS The property	ON-DUTY MANAGER The night
Estate-wide map and incident trends. - One incident report covering every property in the group. - KPI and incident trend, without flying to site. - Act on the trend before TripAdvisor does.	Per-property dashboard and GDPR audit. - Camera health and key-card overlay in a browser tab. - Complaint clips shared by signed link. - Resolve the no-show or dispute in one click.	Lobby and back corridor, on a phone. - Live audio talk-down through the camera speaker. - De-escalate before security has to walk in. - Wake security only when the incident escalates.

Complaints, settled with the clip A signed link to the claims handler in seconds - not a he-said-she-said at the front desk.	Cameras off the guest WiFi A separate ops network behind the TetherBox - recording carries on through any guest-Internet drop.	The 2am call-out, avoided Most lobby and loading-bay incidents are cleared from a phone - night security and the GM stay in bed.

GUEST-AREA DE-ESCALATION

Talk down the lobby incident before night security walks in.

A raised voice at 2am, a guest at the staff door, a driver in the wrong loading bay. The on-duty manager issues a live audio challenge through the camera speaker - or pre-authorises a responder.

- Live two-way audio through compatible camera speakers.
- First-responder access switched on for the incident and switched off after it.
- Full audit log of every challenge and responder session.

INCIDENT · LOBBY CAM-03

02:14 live

Audio challenge - on-duty manager

02:14

Responder access - police

ACTIVATED

Cameras highlighted - lobby, entrance

02:15

Session - logged and closed

02:22

Cameras stay private the rest of the time. Every session on the record.

BUILT FOR HOSPITALITY

The four things every hotel group re-buys CCTV to solve.

Peak traffic & dwell

Count guests through reception, the bar and the lifts by hour. Spot the queue before the GM does.

Camera tampering

Instant alert when a lens is blocked, covered or turned to the wall. The blind spot tells you first.

Restricted-area access

Virtual zones on plant rooms, spa and back-of-house, with the key-card event on the same timeline.

Brand-reputation trail

Time-coded clips on long retention, links that expire on a schedule, every view GDPR-logged for the privacy team.

A SINGLE HOTEL TO A GLOBAL CHAIN

One TetherX account behind every door.

Every property on one map

Group, region and GM each scoped to what they manage. Native iOS / Android, colour-coded health.

Signed-link evidence

Time-bounded, revocable clip links to insurers, police and duty managers. GDPR audit on every share.

AI that earns its alerts

Person and vehicle detection, glass-break and aggressive-tone audio - a fox in the car park stays silent.

Keep the cameras fitted

1,000+ integrations and any ONVIF device - in-region storage chosen per property.

WORKS WITH THE CAMERAS ALREADY FITTED IN EVERY PROPERTY

1,000+ integrations, plus access control and key-card overlay - and any ONVIF camera, no rip-and-replace

SCOPE YOUR GROUP
