

TETHERX FOR RETAIL

Review incidents across **your stores**.

Find and share footage from your stores through one account. Review a reported theft, customer dispute or delivery incident using compatible existing cameras. Give store managers and regional teams access to the sites they need.

- ✓ From one shop to a national chain - same dashboard, same price logic.
- ✓ Quoted, fitted and supported by a TetherX-accredited installer who knows retail.

ILLUSTRATIVE INVESTIGATION

From a reported incident to the relevant footage.

Example: a store manager reports a checkout dispute. The loss-prevention team uses the location and time to find the footage and share it with an authorised colleague.

✗ INFORMATION TO GATHER

- Store** Confirm which store reported the incident.
- Time** Note the reported date and approximate time.
- Place** Identify the checkout or area to review.
- Context** Ask what happened and which details matter.
- Access** Confirm who is authorised to review the footage.
- Sharing** Agree who needs the relevant clip.

✓ REVIEW IN TETHERX

- Open** Select the store from your account.
- Find** Open the camera at the reported time.
- Review** Check footage before and after the incident.
- Select** Choose the relevant footage for sharing.
- Share** Send the clip to an authorised colleague.
- Audit** **Review the recorded access and export history.**

Evidence retrieval up to 90% faster. Assess the workflow on your own footage during the demo.

Share the relevant evidence

Find the camera and time, review the incident and share footage with an authorised colleague.

Records through internet outages

A till-side dispute weeks later is still there to pull, because the TetherBox kept recording through the outage in between.

One platform, one bill

Review video and supported alarm and access events from one account across your stores.

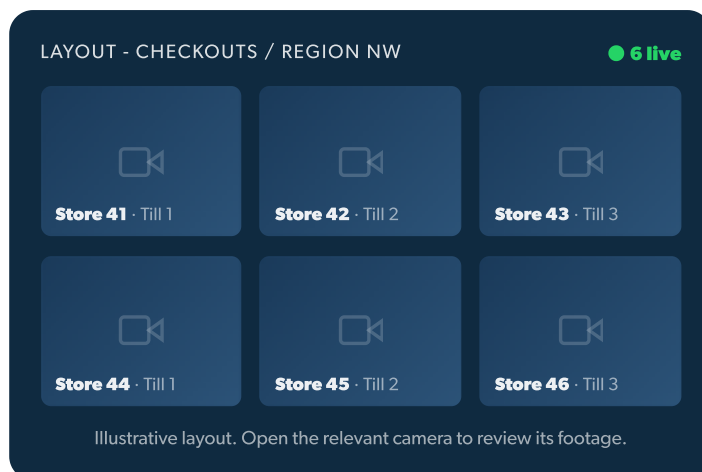

TRUSTED ACROSS MULTI-SITE RETAIL, LEISURE AND HOSPITALITY

SMART LAYOUTS

Every checkout, every store, on one screen.

Arrange a layout that makes sense to the people watching - every till in a region, every back door, every loading bay. The view persists per user: loss prevention sees tills, the head of estate sees doors, the franchisee sees their five stores.

-  Drag-and-drop layouts saved per user, per role.
-  Cycle layouts on a wall display in the LP office.
-  Same view on the phone for the area manager on the road.

BEYOND THE CAMERA

Cover the chiller and the back door as well as the till.

 Environmental sensors Temperature, humidity and water-leak sensors on the chiller and back-of-house. Catch the failed compressor before Monday's stock loss.	 Shipment alerts Alert the moment the delivery van arrives or the back gate opens. ANPR flags repeat and unexpected vehicles on the loading bay.	 Audio talk-down An operator can challenge activity through a compatible speaker and assess whether a response is needed.	 Camera tamper alerts Notification when a camera is covered, moved, sprayed or unplugged. The covering of evidence becomes the evidence.
---	--	---	--

WHAT IT AND FINANCE SIGN OFF

No camera on the open Internet, in any store.

 Encrypted connections ISO 27001 and SOC 2 cloud, AES-256 at rest, TLS 1.2+. Outbound-only VPN per TetherBox - no inbound ports, no camera on the open Internet.	 Local-first plus cloud The TetherBox records on-site, so an internet outage never loses footage. Critical clips sync to the region you pick - footage stays where its rules require.	 No per-store site visits Features and patches roll to every TetherBox automatically. No engineer in a van to update a store, no Saturday maintenance window.	 Audit-ready evidence Every view, export and share logged with user, time and clip. SHA-1 tamper-evident exports. PCI DSS and GDPR aligned, with regional privacy-law support.
